## AMWATCH Lobby Visitor Screening System meets Homeland Security Guidelines

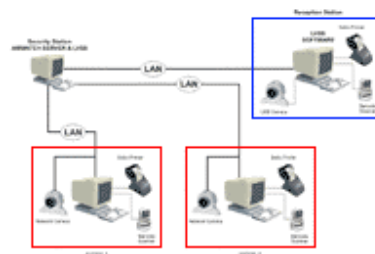

Visitor Screening Controls is high on the agenda for Homeland Security and Amtel offers a system that is simple, secure and accurate. At the heart of the system is a desktop device that takes the picture of the visitor and the ID card in one operation. The Host can send the name(s) of expected visitors by voice-mail, e-mail or direct entry. Within seconds after approval, the system can print a temporary photo-ID badge that is worn by the visitor while on the premises. The badge can also be accompanied by a temporary "Access Card" with limited privileges. If the visitor is in the "History" file, there is no need to take a new picture and the system can issue the photo-ID badge from memory. Upon exit, the receptionist scans

the bar code on the badge to sign out the visitor.

System produces various reports, including an "Evacuation" report that shows all visitors still on the property, along with a photo of the visitor, his ID and the name of the host who is supposed to be with the visitor.

This system is also available in a "Virtual" mode where all control is provided by a remote guard or a remote guard-service. It is also possible to operate multiple reception stations sharing the same database over the web.

**MULTISTATION**  
**1 MASTER + 3 VIRTUAL STATIONS**

Amtel is a privately held company based in Miami, Florida and offers a complete range of security systems that work with each other to provide an integrated solution. We also offer a complete line of GPS/Wireless tracking systems for boats, fleets and trailers.
